

MOSS

Compact and affordable

**ACCURATE,
RELIABLE & SCALABLE
AND ASTONISHINGLY
ECONOMICAL!**

MOSS Station

MOSS

Compact and affordable

MOSS shows the pinnacle of every aspect of technology being applied to entry-level OES.

MOSS epitomizes our commitment to ensuring that every company should be able to afford quality. The path-breaking *MOSS* is smaller than a laptop and the lightest OES ever. Hardware and applications are fully modular, making it the most compact, scalable and yet powerful entry-level OES in the world – by a significant margin.

Epoch-defining breakthrough

Metal Power has heralded a true technological breakthrough with the launch of *MOSS* - the most economical spectrometer ever made. It's not just the capital cost that *MOSS* addresses, but also the operating costs – with world beating optimization of Argon consumption, offering 2,000+ burns / cylinder. The real narrative of *MOSS* however, is not about economy; it's about how *MOSS* shows the pinnacle of every aspect of technology being applied to entry-level OES – elevating what “entry-level” means!

Scale of Applications!

Steels

A *MOSS* can analyse 30+ elements – including Nitrogen. In alloy steels for example, it analyses Carbon (C), Sulphur (S), Phosphorus (P) and Nitrogen (N) down to 50 ppm – and elements like Boron (B) down to as low as 5 ppm. An equivalent model from any other source would cost double the price.

This makes it ideal for all manner of rolling mills, foundries, casting units, TMT units etc. and even for large plants who wish to have good backup units for their different workshops (Machining Centres, Forge Shops, Heat Treatment Workshops, Stockyards etc.) to enable them to take quick decisions and/or for ensuring that there are no mix-ups. It could also be used at In Gates for materials or at various points in yards or intermediate testing points!

Cast Iron / SG Iron

MOSS analyses all the required elements for CI/SGI including Mg, Ce and La – and goes even further, adding the benefit of Nitrogen analysis too! This makes *MOSS* the ideal unit for all manner of CI/SGI manufacturing firms.

Non-ferrous alloys

For those in non-ferrous alloy-making too, *MOSS* is the ideal instrument; analyzing virtually all key elements down to the required ranges and being both easy and very economical to acquire, operate and maintain, the *MOSS* is the ideal unit for both Production environments and as backup to larger OES like the *Metavision-1008i²* or the *Metavision-10008X*.

High power and efficiency

For any spectrometer, the quality of analyses as well as the stability is very closely correlated with the quality of the power source – and the stability of the current discharge it provides. Unlike virtually any other entry-level model, *MOSS* carries a fully digital current-controlled plasma generation source with ratings that ensure the greatest level of flexibility. With ultra-granular computer-based control over each parameter of the discharge, the power unit ensures the highest levels of plasma stability and the ability to generate the ideal spectra for different applications. Designed for universal inputs of 90-270 V AC, this is also truly global.

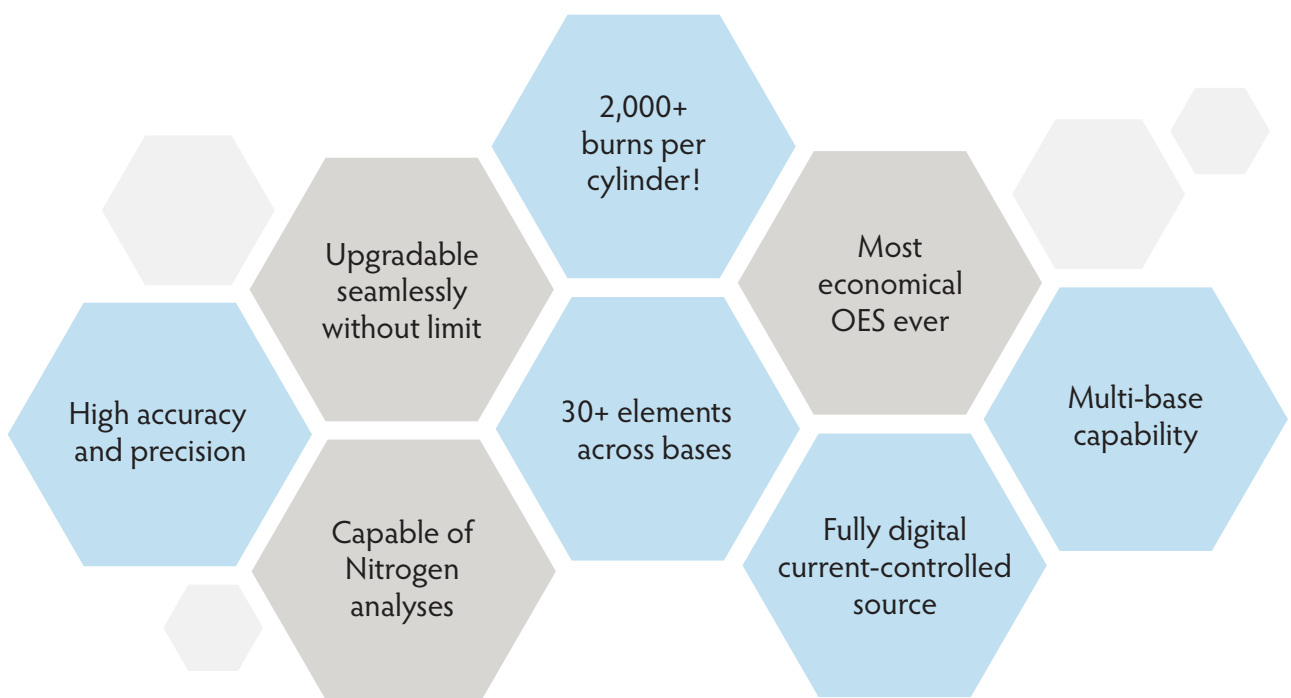

MOSS

Compact and affordable

The Metal Power Advantage

MOSS is the only entry-level OES in the world that offers truly usable Nitrogen analysis in Steels. **MOSS** also offers wire analysis down to 2 mm diameter, foil analysis down to 0.5 mm thickness, full support for **MetaCloud**, Melt Addition Programs, **MetaLib Pro** and also custom applications as may be required by individual customers

World-wide service support

Metal Power offers multi-modal Service support to all customers globally and prioritizes customer proximity through true omnichannel access. Underpinned by our Salesforce system, all customers get immediate access to Service and call-logging through the MetaCloud mobile app, website forms, telephonic access, email and WhatsApp chat. Each call is logged instantly on the CRM and is tracked against stringent SLAs. Customers too can track the progress and status of any call via MetaCloud which provides them instant updates from the CRM. For addressing calls with immediacy, apart from direct site visits, we ensure that customers always have access to online / remote support as well.

With a team of 35+ in-house engineers and a large and high-quality pool of trained engineers through our partners, we guarantee the highest level of service and delight. Each of our engineers is a highly-skilled professional and we ensure that all possess extensive knowledge and experience in the field, allowing us to address any customer needs promptly and efficiently. All our engineers and partners, and therefore our customers are also supported by our dedicated Central Helpdesk that provides guidance, coordination and also Applications Support based on what each situation demands. Each Service interaction is closely monitored, with internal assessments and customer feedback being used to continuously improve service levels and Customer Delight.

A comprehensive ecosystem for your *MOSS*

Our other Spectrometers

Metavision-1008X
The zenith of sensitivity

When excellence is not good enough

Metavision-1008i
Laboratory powerhouse

Metavision-RX
Extremely rugged oil analyzer

Mobile-OES
High performance on wheels

Founded in 1987, Metal Power provides a comprehensive range of products, applications and services to meet the analytical needs of Production and Quality Control/Assurance Laboratories. Our product portfolio spans Laboratory (Stationary) as well as Mobile Optical/Atomic Emission Spectrometers (OES/AES) for metals analysis, Rotating Disc Electrode (RDE) Spectrometers for analysis of oil samples, Sample Preparation Machines for spectrometers as well as a wide range of accessories and allied instruments that help optimize the analytical outputs of our spectrometers.

Today the Company boasts over 35 years of experience in spectrometry and has a truly global presence, directly and indirectly supplying and servicing our customer base across 35+ countries spread over 6 continents.

True pioneers in the field of CCD- and CMOS-based Spectrometers, our product philosophy is driven by the focus on offering a range of models, each tailored to meet specific customer needs – both analytical and financial. As an outcome, we offer the world's widest range of spectrometers – with each offering positioned to be best-in-class in terms of features as well as on economic value.

Metal Power Analytical offers both Stationary (Laboratory) as well as Mobile OES for metals analysis. Our stationary spectrometer range spans from the R&D-grade *Metavision-10008X*, that delivers virtually every feature known in spectrometry, through the Laboratory-grade *Metavision-1008i³* and *Metavision-1008i*, to the entry-level *MOSS* – the world's smallest, most economical and first truly scalable OES. In mobile OES too, we offer different models, each with a choice of probes – Arc, Spark, UV and combined probe options – to meet every user need.

The *Metavision-RX* RDE-OES offers the very best option for customers that wish to analyze oil samples for contaminants, additives and/or wear metals. Including the option of Sulphur analysis, the instrument offers the widest elemental coverage, and leverages all our expertise in the field of CMOS/CCD detector-based optics to offer low detection limits with exceptional accuracy and precision.
